New Britain, CT 06053

For Immediate Release - New Britain, CT

Standard Manufacturing Co, LLC based in New Britain, CT announces the introduction of the new and innovative S333 Thunderstruck™ pistol. The features of the S333 Thunderstruck make it the ultimate personal defense pistol because of its firepower, ease of use, safety, and reliability.

The S333 Thunderstruck™ features 2 barrels that fire two .22 Win. Mag. rimfire cartridges simultaneously with each pull of the trigger. The .22 Win. Mag. rimfire cartridge was selected for its ballistic performance combined with very low recoil. Four pulls of the trigger delivers eight rounds in approximately 3 seconds creating a curtain of personal protection. Additionally, solid rounds and birdshot rounds can be combined to provide a level of protection which no other gun can provide.

The S333 Thunderstruck™ features an innovative double cantilever trigger with an integral blade style safety, which provides concise and deliberate trigger pulls for shooters of all abilities. In addition to the blade style safety, the S333 Thunderstruck™ is a double action system which will only fire when the blade safety is depressed and the double cantilever trigger is completely pulled. This essentially eliminates any chance of accidental discharge. The S333 Thunderstruck™ offers the universal simplicity of operation of a double action revolver with the added redundancy of a two barrel firing system for the ultimate in reliability and firepower.

The S333 Thunderstruck™ is expected to be on sale in May of 2019 and is available through all major distributors and gun stores throughout the country for a MSRP of \$369.00. For more information contact Standard Manufacturing company at PR@stdgun.com or visit us at stdgun.com.

Specifications:

Caliber .22 Winchester Magnum
